

Internet

The Meyer website offers current information on products, projects and our company. Photometric files (LDT and IES-format) and product data sheets can be downloaded for each luminaire.

Optical systems

The precise and efficient lighting technology supplied by Meyer has become a benchmark in the industry. The centerpiece is the development of innovative reflectors and optical lenses. Depending on the area of application, we offer optimized systems for directing light. This combined with perfect glare control ensures a high level of visual comfort.

LED Technology

The high quality level of Meyer LED products is ensured by the use of top quality components and by efficient heat management. The binnings of the LED modules of all luminaires we manufacture are registered and documented. This enables us to ensure continuity of colour temperature and brightness if we have to supply replacements or additional quantities for existing projects.

Customization/special finishes

Customised solutions and modifications of the luminaires are possible. Special colours can be applied as polyester powder coat. We always use a corrosion resistant low copper aluminium alloy (EN AL AlSi12). If the luminaires are to be installed in an area where they are likely to come into contact with salt water or other corrosive substances, we strongly recommend a special two layer paint system consisting of an epoxy powder primer, baked and followed by polyester powder topcoat.
